Accessibility

These checks highlight opportunities to [improve the accessibility of your web app](#). Automatic detection can only detect a subset of issues and does not guarantee the accessibility of your web app, so [manual testing](#) is also encouraged.

BEST PRACTICES

▲ [\[user-scalable="no"\]](#) is used in the `<meta name="viewport">` element or the [\[maximum-scale\]](#) attribute is less than 5. ▼

▲ Touch targets do not have sufficient size or spacing. ▼

These items highlight common accessibility best practices.

NAMES AND LABELS

▲ `<frame>` or `<iframe>` elements do not have a title ▼

▲ Links do not have a discernible name ▼

These are opportunities to improve the semantics of the controls in your application. This may enhance the experience for users of assistive technology, like a screen reader.

INTERNATIONALIZATION AND LOCALIZATION

▲ `<html>` element does not have a [\[lang\]](#) attribute ▼

These are opportunities to improve the interpretation of your content by users in different locales.

AUDIO AND VIDEO

○ `<video>` elements contain a `<track>` element with [\[kind="captions"\]](#) ▼

These are opportunities to provide alternative content for audio and video. This may improve the experience for users with hearing or vision impairments.

ADDITIONAL ITEMS TO MANUALLY CHECK (10)

Show

These items address areas which an automated testing tool cannot cover. Learn more in our guide on [conducting an accessibility review](#).
